

Convert each equation into slope-intercept form. Show each step to receive full credit.

1. $5x + 3y = -15$

2. $4x - 3y = -12$

3. $4y + 21 = -7$

4. $-3x - y = 9$

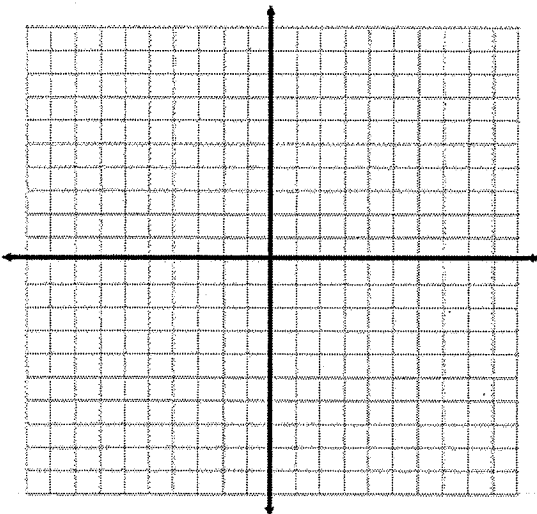

5. $4x - 3 = 5x - 17$

6. $17x - 34y = 68$

Rewrite each linear equation in slope intercept form and graph.

7. $2y - 1 = 8x - 5$

8. $-3x - y = 9$

9. $18 + 3x = 6$

10. $9 - 3y = -2x$

11. $4y - 24 = -8$

12. $5x + 6y = 2x - 24$
